

AKASH DAS

SOFTWARE DEVELOPER

5 years experience in web development

PROFILE

As a passionate and skilled software developer, I thrive on crafting innovative, efficient, and scalable solutions to complex problems. With a strong foundation in a wide range of programming languages and frameworks, I bring both technical expertise and a sharp attention to detail to every project I undertake. I excel in collaborative, fast-paced environments where teamwork and clear communication are essential to success.

Driven by a deep interest in cutting-edge technologies, I am always eager to learn, adapt, and apply the latest tools and methodologies to deliver high-quality software products. I take pride in writing clean, maintainable code and contributing meaningfully to the overall success of the teams and projects I am part of.

KEY SKILLS

Project management, public relations, team collaboration, time management, leadership and mentorship, effective communication, critical thinking and problem solving, strategic planning, technical decision-making, conflict resolution, adaptability and flexibility, client relationship management

WORK EXPERIENCE

Zensar Technologies

AUGUST 2020 - NOVEMBER 2020

Associate Software Developer

I began my professional journey as a trainee in .NET development, where I built a strong foundation in software development principles, object-oriented programming, and application development using the Microsoft .NET framework. During this intensive 4-month training period, I gained hands-on experience in C#, ASP.NET and SQL Server, working on real-time assignments and learning best practices in coding, debugging, and performance optimization.

Following my training, I transitioned into the role of an Associate Software Developer at Zensar Technologies, where I applied and expanded my .NET expertise in a collaborative, agile environment. My responsibilities included developing and maintaining web applications, writing clean and efficient code, participating in code reviews, and contributing to the full software development life cycle (SDLC). I worked closely with cross-functional teams to understand business requirements and translate them into robust technical solutions.

This experience not only deepened my technical knowledge of the .NET ecosystem but also enhanced my skills in problem-solving, teamwork, and delivering high-quality, scalable software under tight deadlines.

Royal Research

DECEMBER 2020 - JUNE 2021

Academic Researcher

In addition to my development experience, I have worked as an Academic Researcher at Royal Research, where I conducted extensive online research in the domain of software and technology. Over a period of 7 months, I contributed to a variety of international academic and industry-related projects, supporting students and professionals from foreign countries.

My responsibilities included researching complex technical topics, generating well-structured and original content, and developing small-scale software solutions tailored to specific academic or project requirements. This role honed my ability to understand diverse software systems, quickly learn new tools and technologies, and communicate technical concepts effectively through written content.

This experience significantly strengthened my research, writing, and technical documentation skills—complementing my software development background with strong analytical and communication abilities.

Pepex Private Limited

(Sister Concern of Royal Research)

July 2021 - Sep 2024

Software Developer

Over the course of my development journey, I have worked on more than eight live projects, applying various technologies such as PHP, Laravel, and Python with Django. These hands-on experiences have strengthened my expertise in full-stack development, MVC architecture, RESTful APIs, and dynamic web application deployment.

Some of the key projects I have developed include:

- Online Exam Portal – Developed a secure and scalable platform for conducting online assessments, featuring user authentication, automated grading, and real-time result generation using PHP.
- Human Resource Management System (HRMS) – Built using Laravel, this comprehensive system handled employee data, leave tracking, payroll processing, and admin dashboards.
- Project Management Portal – Created to manage team tasks, timelines, and deliverables efficiently. It featured Kanban boards, role-based access, and reporting tools.
- Interview Portal – Designed a scheduling and feedback system for recruitment processes, supporting candidate assessments, panel coordination, and result analysis.
- Marketing Portal – Developed a campaign and lead management tool with integrated analytics and CRM functionalities.
- Accounts Portal – Built an application for managing invoices, expenses, financial records, and generating automated reports with role-based permissions.

These projects gave me the opportunity to collaborate in cross-functional teams, follow agile development practices, and deliver real-world solutions aligned with client needs.

FabHub Technologies

Oct 2024 - Feb 2025

FullStack Developer

During my tenure at Fabhub Technologies, I worked as a Full-Stack Developer on their flagship e-commerce platform, Showloom.com, which caters to fashion and lifestyle products. My primary focus was on both maintaining and extending the platform's capabilities using PHP with the Laravel framework.

Key Contributions:

- Led the development of new features such as product filtering, dynamic search, cart enhancements, and a user-friendly admin dashboard to streamline inventory and order management.
- Performed regular maintenance to address bugs, improve page load speed, and ensure mobile responsiveness across various devices and browsers.
- Built reusable Laravel components and optimized backend logic to improve performance and maintainability of the codebase.
- Integrated third-party APIs for secure payment gateways (Razorpay/Stripe), SMS/email notifications, and logistics tracking, ensuring a seamless user experience.
- Designed and implemented database schemas for new modules using MySQL, focusing on data integrity and query efficiency.
- Collaborated with UI/UX designers to transform Figma wireframes into fully functional and responsive front-end interfaces using Blade templates, HTML5, CSS3, Bootstrap, and JavaScript (including jQuery).
- Worked within an Agile development cycle, attending daily stand-ups, sprint planning, and retrospectives, while ensuring timely delivery of tasks and features.
- Used Git for version control, managing branches and pull requests, and participated in peer code reviews to uphold clean and maintainable code standards.
- Monitored and optimized application performance through profiling tools and log analysis, ensuring scalability and uptime during traffic spikes.

This experience gave me strong exposure to the end-to-end development lifecycle of a production-grade e-commerce platform, from back-end architecture to user-facing functionality. I also developed a deeper understanding of e-commerce-specific challenges like cart abandonment handling, order fulfillment automation, customer data protection, and payment security protocols.

Technical Head

In March 2025, I was appointed as the Technical Head at Fashionsta Technologies, a sister concern of FabHub Technologies. In this leadership role, I am responsible for overseeing all aspects of technical strategy, team leadership, and full-stack web development for multiple ongoing and upcoming web-based projects.

Key Responsibilities:

- Leading a cross-functional development team, managing daily operations, assigning tasks, conducting code reviews, and mentoring junior developers to ensure quality and timely project delivery.
- Driving full-stack development using modern technologies including PHP with Laravel, Python with Django, MySQL, HTML5, CSS3, JavaScript, and RESTful APIs—playing a hands-on role in both backend and frontend development.
- Architecting technical solutions for new projects by selecting appropriate tech stacks, defining database schemas, and setting up development and deployment pipelines.
- Making key technical and strategic decisions, including technology adoption, process improvements, resource allocation, and long-term scalability planning.
- Interfacing with stakeholders and management to gather requirements, provide project updates, and ensure that business goals are aligned with technical implementations.
- Managing DevOps workflows, including deployment on shared hosting and cloud platforms, setting up version control (Git), managing backups, and ensuring system uptime and security.
- Leading end-to-end development lifecycles, from initial planning and prototyping to deployment, testing, and post-launch support.

Achievements:

- Successfully scaled the development team and established coding and development standards.
- Introduced Agile methodologies to improve team productivity and project transparency.
- Oversaw the launch and post-deployment support of multiple client-facing applications within tight deadlines.

This role has not only strengthened my technical expertise and project management skills but has also allowed me to grow as a decision-maker and leader, capable of guiding both the technical direction and the people behind it.

Axonbyte Technologies FullStack Developer

December 2025 - Present

- Working as a Full Stack Developer with a strong focus on PHP (Laravel) for building scalable, secure, and high-performance web applications.
- Actively involved in the end-to-end development lifecycle, including requirement analysis, system design, development, testing, deployment, and maintenance.
- Developed and maintained client-based web applications and custom software solutions tailored to business requirements across multiple domains.
- Implemented RESTful APIs to enable smooth communication between frontend, backend, and third-party services.
- Worked extensively with Laravel features such as MVC architecture, Eloquent ORM, middleware, authentication, authorization, queues, and task scheduling.
- Integrated real-time communication using sockets, enabling live updates, notifications, and interactive features within web applications.
- Collaborated on Android application backend development, providing API support, data synchronization, and secure server-side logic for mobile apps.
- Designed and optimized MySQL database schemas, ensuring data integrity, performance optimization, and efficient query execution.
- Developed responsive and user-friendly interfaces using HTML, CSS, JavaScript, and frontend libraries as per project needs.
- Handled bug fixing, performance tuning, and code optimization to improve application reliability and user experience.
- Worked closely with clients, project managers, and cross-functional teams to understand requirements and deliver solutions within deadlines.
- Followed coding standards, version control (Git), and best practices to maintain clean, reusable, and maintainable code.
- Assisted in deployment, server configuration, and production support, ensuring smooth application releases and minimal downtime.
- Gained experience in managing multiple projects simultaneously, adapting quickly to changing requirements and priorities.
- Contributed to continuous improvement by suggesting technical enhancements and scalable architecture solutions for long-term project growth.

WORKING WITH API'S

Twilio API	registration and login using OTP via text message and email
Whatsapp API	registration and login via OTP order confirmations and order details via whatsapp
ShipRocket API	order pickup and delivery
PayU	payment process for Quick-commerce portal
RazorPay	payment process for E-commerce portal
CashFree	payment process for E-commerce portal

WORKING WITH CLOUD PLATFORM

AWS (S3 Bucket)	storing and fetching images of Quickcommerce products
Cloudflare (R2 Bucket)	storing and fetching images and documents such as invoices, documents of Quickcommerce portal

CERTIFICATES

2018	Got Gold certificate For summer internship from Jio
2019	website development certified workshop from versicle technologies
2020	Diploma in drawing with distinction from BANGIYA SANGEET PARISHAD
2019	One day workshop on Python
2019	spoken English by TECH TRADE INDIA
2020	workshop on cloud computing by Jis University
2020	Computer Forensic Course On Udemy

ACHIEVEMENTS

2017	selected 4 times as CII (confederation of India Industry) for innovative project prototype-making
2017	participated in Business innovation seminar and got certificate from IIM Kolkata
2018	Selected as one of the representatives from west Bengal State NSS for National Youth Festival 2018
2018	Got shortlisted for AICTE CHATRAVISWAKARMA AWARD 2018
2019	Selected by TATA STEEL for innovative prototypemaking
2019	My research on "Smart voice controlled wheelchair "got published in International Journal of Computer Science And Engineering
2020	My research on "Smart voice controlled wheelchair "got published in ResearchGate.Net
